Picture Has a Place...*

# BLUE<sub>2</sub>CAN

Bluetooth Camera Area Network for Nikon

Blue2CAN, when used with a compatible Bluetooth GPS receiver, automatically records the geo-location of every picture taken into the EXIF header of each image file. With this information, the location each image was taken can be shown on a map.

Compatible with Most Bluetooth GPS Receivers and the following cameras: Nikon D3, D300, D2Xs, D2X, D2HS, D200, and the Fuji FinePix S5

### Geospatial Still Imagery

Bluetooth to Camera Area Network (Blue2CAN) is an integrated solution for geo-tagging digital still images with GPS data. It uses a Bluetooth enabled GPS unit, combined with industry leading Nikon D200, D2X, D2Xs, D2Hs, D3 and D300 product lines to directly capture geospatially referenced images. It provides the easiest, most reliable collection method today.

### How it Works

Blue2CAN plugs directly into the 10 pin connector on the front of the camera without the use of cables. It uses a small amount of power from the camera to operate its Bluetooth radio and connects automatically to any Bluetooth enabled GPS receiver in proximity. There is "zero configuration" required—just plug it in, turn on your GPS receiver, and start shooting. No buttons to push except the shutter!

### Features:

- No Post Processing
- No Cables
- Automatic Device Pairing
- Intelligent Power Management
- Quick GPS Signal Access
- Position Hold for Indoor Photography

### Compatible Software Includes:

- Red Hen Systems' isWhere
- Red Hen Systems' PixPoint
- Red Hen Systems' MediaMapper 5.3 Photo Edition
- Red Hen Systems' MediaMapper Sever (MMS)
