

## **Serracor-NK and Uterine Fibroids**

**Uterine Fibroids** can affect women from their early 20's to their late 40's. This can be an alarming diagnosis as this represents a large percentage of women's child bearing years. Most fibroids can be detected early and are non cancerous when detected in time. As to what is the cause of this condition, the medical field has suggested that a unbalanced hormones could be the contributing factor. When diagnosed, doctors have similar approaches to treating Uterine Fibroids. The first is surgery, not only do many women want save surgery as the very last option but if and when a woman does have surgery to remove fibroids they have many other major risks, one of those being the likely chance that they would not be able to have children ever again and the financial burden this can be also is something to consider. While surgery only addresses the removal of the fibroid, the other approach being used by the medical field is prescribing medications such as low dose birth control pills, to GnRHa's (gonadotropin releasing hormone agonists). These medications do address the battle for estrogen dominance taking place within a women's body, but they have a high rate of side effects that can lead to more serious conditions. Other side effects of hormone medication are depression, mood swings, severe menstruation (heavy bleeding), much longer periods and in some cases ovarian cancer. These are just a few of the many problems reported by women with hormone therapy. But now more and more woman are seeking a new approach one that is all natural, safe and with little to no side effects. And the best part, it is non-surgical. 1

**SERRACOR-NK** a fibrin dissolving systemic enzyme that woman have been using for years effectively for the dispersing of fibroids. Serracor-NK is at the fore front of systemic enzyme therapy. Serracor-NK address's uterine fibroids into two similar fashions, the first with Serrapeptase a proteolytic systemic enzyme that has a profound affect that involves dissolving of the growth of fibrous tissues within cysts or fibroids that occur within women's uterus. Serracor-NK attacks fibrin by attaching itself into the fibrosis tissue, then like a lock and key mechanism the fibrin dissolves and is removed from the body by sweat, urine or feces. The second effecicous ingredient in Serracor-NK is a fibrolytic enzyme called Nattokinase. Nattokinase is clinically proven to not only eat away fibrin in the non tissue sources of the body but it also has miraculous results in anti-coagulation and systemically in the blood stream. The combination of these two enzymes in Serracor-NK will also lower your body's inflammatory response, modulate your immune system, increase your immune response and will clear away toxins and debris from your blood but also your liver and kidneys. 2

Women can experience the following effects when taking Serracor-NK that will let them know that they have stop the growth of their fibroid and that Serracor-NK is working effectively at dissolving the fibroid. Here are some common questions associated with enzymes and uterine fibroids and other general questions about fibroids:2a

### **Q. What are the different types of fibroids?**

**A.** There are four different types: Subserous (outer wall), Submucosal (inside the uterine cavity, Intramural (within the uterine wall), Penduculated (attached to the uterus by a stalk)

### **Q. Can fibroids grow in different parts of the uterus?**

**A.** Yes, fibroids can grow in many different locations around and in the uterus

**Q. What are some of the symptoms associated with uterine fibroids?**

A. Heavy menstrual bleeding, irregular menstrual bleeding and spotting, pelvic pressure and pain, urinary frequency and urgency, constipation and hemorrhoids, infertility, loss of pregnancy.

**Q. Can I expect to see a discharge as the fibroid is breaking down?**

A. It depends; if the fibroid(s) are inside the uterine cavity, you may notice a discharge. This is a common sign that the lysing (dissolving) of the fibroid is occurring. The color of this discharge can range from clear to white to blood red or brown periodically during the first few months. If you experience any discharge that alarms you, please consult with your doctor. If the fibroid(s) are in the lining, they will be broken down, carried through the circulatory system and excreted via the bowel. This is not something one would notice.

**Q. Will consuming soy feed the growth of uterine fibroids?**

A. Soy is a concentrated phytoestrogen. Many women have related that the consumption of soy has contributed to the growth of their fibroid(s).

**Q. What diet is best when attempting to shrink the growth of fibroids?**

A. A low fat, high fiber diet is best. Eating organic meats, fruits & vegetables, and dairy will help eliminate xenoestrogens such as chemical pesticides and human growth hormones that can mimic estrogen in the body.

**Q. What is a calcified fibroid?**

A. Older fibroids can develop a calcium coating which is basically a hard outer shell that may be the body's way of isolating the fibroid. This calcification can prevent the enzymes from doing their work.

**Q. How do I know if my fibroid is calcified?**

A. Your doctor should be able to determine this via an ultrasound.

**Q. What helps break down the calcification?**

A. Magnesium Citrate helps reduce excess calcium in the body when taken alone without calcium.<sup>3</sup>

***Uterine Fibroid Product Package***

At Pivotal Health we have done much research to insure that we can provide you with not only efficacious and proven products. Our company is also at the fore front of the latest clinical research, medical news and new medicinal approaches to the conditions that people of all ages are suffering from. After much correspondence with health professionals and women dealing with uterine fibroids, we feel that we have taken the next step in assisting you in the disbanding of fibroids. <sup>5</sup>

Over all the use of systemic enzymes is a useful option for women dealing with this conditions. Serracor-NK is the staple product for our uterine fibroid package. Serra RX80 contains serrapeptase 80,000 iu's, by adding this product along with Serracor-NK users take a more

aggressive approach to their condition. Many women are currently taking these two products together and convey that their fibroids are in remission or have dissolved completely. We strongly recommend adding Serra RX80 with Serracor-NK as much research shows that high dosages of serrapeptase will dramatically lower your fibrogen levels quickly and safely.

Hormones play a large part in the formation of uterine fibroids along with your body's immune response to heal itself from this condition. We strongly suggest that to effectively combat the effects of a hormonal imbalance that women should take Fibrovera (click here to read). This product was formed specifically for women afflicted with the many effects of low estrogen levels. 6

While there are many biological changes taking place within your body your immune system will start to decrease by lowering your immune response and your fibroids could start to enlarge or they could stay in a stagnant state. By supplementing with Vitamin D10 your immune response will strive back and the modulation of your immune system will not only assist your progress in your fight against your fibroids. But you will become less susceptible to illnesses and any other immune related conditions. 7

Please use the following dosage chart for our Uterine Fibroid Package:

<b>Uterine Fibroid Products</b>	<b>Introduction Phase</b> <i>7 days period (not needed for existing serracor users)</i>	<b>Therapeutic Phase</b> <i>30 days or until desired results (30-270 days)</i>	<b>Maintenance Phase</b> <i>taken for 30-360 (depending upon each person)</i>
	Capsule per day (x) a day	Capsule per day (x) a day	Capsule per day (x) a day
<b>SERRACOR- NK</b>	<i>1 capsule a day for 7 days</i>	<i>3 capsules, 3x a day</i>	<i>1 capsule, 3x a day</i>
<b>Serra RX 80</b>	<i>1 capsule a day for 7 days</i>	<i>1 capsules, 3x a day</i>	<i>1 capsule, 2x a day</i>
<b>Fibrovera</b>	<i>2 capsules , 2x a day</i>	<i>4 capsule, 2x a day</i>	<i>2 capsules, 2x a day</i>
<b>Vitamin D10</b>	<i>1 tablet a day</i>	<i>1 tablet a day</i>	<i>1 tablet a day</i>

The dosage chart that is to be used only as suggested use, not as a prescription dosage.
